

## Heavily galvanised **FENCE DROPPERS**

### Whites Wires droppers

Whites Wires droppers are manufactured from **high grade steel** and are heavily galvanised to ensure long life. They come packed in easy-to-handle **bundles of 25** in three popular sizes to suit most fences:

94cm,  
107cm and  
117cm.

Each pack of 25 fence droppers includes a fixing tool, ample clips and easily followed fixing instructions.

### Why use droppers?

Fence droppers are approximately a third of the cost of fence posts and can be used as a substitute when spacing fence components.

Whites Wires droppers act not only as wire spacers but they also assist the transfer of shock loadings from one or two wires to the whole fence.

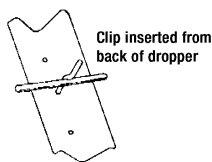

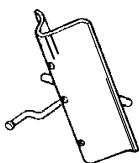

Because they are strong and lightweight droppers add strength and flexibility to a fence. They also provide a good visual barrier for stock.

# Heavily galvanised FENCE DROPPERS

## Applications

Whites Wires droppers can be used when building a new fence or where repairs are needed to strengthen an existing fence. They are easily attached to barbed wire, plain wire or prefabricated fencing using the clips and tool provided.

## Attachment

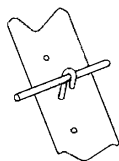

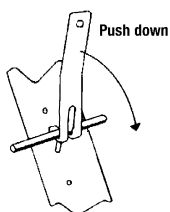

### STEP 1

Dropper is placed on far side of the line with rolled edges of the "V" section towards the erector.

### STEP 2

The galvanised fastening clips are pinned through the dropper holes to rest on top of the line wires.

### STEP 3

The fixing tool is hooked around the line wires with the fastening clip through the tool jaws. The tool is then pushed downwards as far as it will go.

### STEP 4

Clip in finished position. Secure clamping in seconds.
