

KWIK-LOCK ***wire joiners***

Easy to use one-way action

Simply follow the arrows and insert a clean-cut end into the smaller holes with 50mm overhang to complete the join.

Superior holding power: the Kwik-Lock difference

Kwik-Lock's secret is the way it grips the wire from all sides giving it greater holding power. Kwik-Lock's extra strength makes it ideal for high-strain applications such as high tensile wire used in vineyards.

How strong?

Independent testing by a NATA-accredited laboratory has shown that Kwik-Lock wire joiners will hold on average an amazing 90% of the breaking load of 2.5mm high tensile wire. This is well over **three times** the recommended tension strain of this wire when used for fencing.

KWIK-LOCK

wire joiners

Selecting your Kwik-Lock wire joiner

Medium Kwik-Lock

For high tensile and soft fencing wires.

2.40 to 3.00mm

Large Kwik-Lock

For high tensile and soft fencing wires.

3.15mm to 4.00mm

For barbed wires.

1.57mm to 1.80mm

What our customers say...

"...quick, easy and reliable joining device... saves time and cost effective."

Gary, fencing contractor.

About Whites Wires

- Australian owned family company
- Over 30 years experience as "wire specialists"
- Australia's largest range of high quality fencing products
